

PERFORMANCE LUBRICATION

## PRODUCT INFORMATION

# ULTRA 5

## Lubricant for use in hydraulic clutches

### DESCRIPTION

Global ultra 5 is formulated with high quality paraffin oils and selected additives.

### PERFORMANCE

- Great lubricating and anti-wear ability. The anti-wear additives it contains prevent friction between the moving components under load limit conditions, helping to extend their life and an operation without breakdowns or unforeseen stops.
- Resistance to oxidation and corrosion. The oil presents the great degradation stability in service. It does not form residues or stickiness that can cause serious damage. It protects metal parts from the formation of oxide and rust.
- Excellent viscosity behaviour with respect to temperature. It keeps the viscosity had a high level, even if the operating temperature increases, offering additional protection against component wear.
- It prevents foam formation and has good deaeration and demulsification. It facilitates the rapid elimination of air and water that have entered the oil and compromise the good lubrication and conservation of the mechanical components.

### CONDITIONS OF USE

Recommended for the lubrication of clutches, spindles, heads, high-speed bearings and pneumatic maintenance units.

### TECHNICAL FEATURES

|                           |                        |                        |               |
|---------------------------|------------------------|------------------------|---------------|
| <b>APPEARANCE:</b>        | Yellow                 | <b>FREEZING POINT:</b> | -30°C / -22 F |
| <b>DENSITY AT 15°C:</b>   | 0.840                  | <b>FLASHPOINT:</b>     | 110°C / 230 F |
| <b>VISCOSITY AT 40°C:</b> | 5.3 mm <sup>2</sup> /s | <b>FZG TEST:</b>       | 12            |
